

Chantal Chiddle, P.Eng., FEC for PEO Councillor at Large

With over 20 years of Engineering experience in the consulting field, Municipal utility companies and in the construction industry, I have a broad understanding of the issues faced by Professional Engineers, and the industry as a whole. I have gained valuable insight into Engineering through several lenses – client/owner, designer/engineering firm and constructor.

One of the biggest challenges faced by PEO is relevance: to the members, to recent graduates and to the public. As a self-regulator, PEO exists to protect and serve the public interest. I believe in and support continued focus on regulatory work, including the changes required to our licensing processes to meet the changing dynamics of the Engineering profession.

I have over 15 years of volunteer service with PEO, most recently, as Councillor at Large. As a member of Council, I currently Chair the Regulatory Policy and Legislation Committee (RPLC) and sit on the Risk Assessment Working Group reviewing Chapter Activities.

As Councillor at Large, I will continue to work with Council to provide effective and timely communication with the license holders, seek out feedback from others as needed and work to ensure Council decisions are based on facts and not conjecture.
