With the **past 3+ years** of **Board Governance training** complete, it's time for the **PEO Governing Council** to get back to its primary **Self-Governing** duty to **Regulate Ontario's Engineering** professions, including **Emerging Disciplines**.

- It was interesting to hear **Incumbent Councillors** eager to share & attempt to justify **Council Decisions**, despite there being a lack of 2-way communication & transparency with Council & Committee meeting minutes with recordings... No secret meetings please!
- Council has made some “**bad**” **Decisions**, with resulted in **unintended consequences** and now needs immediate decision reversal:
 - Re-instate immediately the **Engineering-in-Training (EIT)** designation & our absolutely necessary “**EIT**” program. Bring it back in some other form, is totally unnecessary and will result in further confusion & result in yet further delays (now projected up to 6+ years) & revenue loss upwards to \$5 million.
 - Embrace Advanced Technologies, with the “**Emerging Disciplines**” with 30by30 support towards the **2050 Vision**.
 - Re-instate the **Education Outreach Committee**, with **Engineering University Scholarship** Rewards & Incentives.
- Enhanced **CPD / PEAK** for Efficiency & Effectiveness especially among other Canadian Jurisdiction within **Engineers Canada** for greater Mobility applications & Annual Filings purposes. We need to better utilize **Engineers Canada** too!
- Embrace **Chapter** within **PEO's Member Engagement Strategy**, where strategic **Chapter Reform** is now critically important & necessary to take advantage of virtual technology & mobility means using a “**Cluster**” lens where Regions create unnecessary Boundaries. There has to be more than just a new revised **Chapter Manual** &/or an **OSPE Take Over** proposal. It is possible to reduce the number of 36 Chapters, where they are encouraged to collobriate together with other **Learned Societies** & **Key Stakeholders** for greater **Regulatory** focused activities.
