

## **Sean Decloux** P.Eng, M.Eng, MBA, PMP Councillor-at-Large Elect

---

After graduating from the University of Maine in 2016, I returned to Ontario to launch my career in civil engineering. As an international graduate, I faced the challenge of navigating the licensure process without a local network. Despite these hurdles, I successfully earned my P.Eng designation in 2020. Among the advanced degrees and certifications I have achieved, P.Eng remains the one I am most proud of due to the unique responsibilities it carries.

Since 2020, I have mentored more than 10 aspiring engineers, helping them achieve licensure through personalized guidance and as part of PEO's Licensure Assistance Guide Program. Supporting others through this evolving process has been one of the most rewarding aspects of my career.

My formal contributions to PEO include serving as a Licensure Assistance Guide, participating in the 2050 Visioning Process Advisory Group, and acting as a Government Liaison Rep. Informally, I have promoted PEO's vital role in self-regulation as a guest speaker at numerous STEM-focused events.

If elected, I aim to:

- Reintroduce and enhance the EIT program to better support early-career engineers;
- Explore partnership with accredited PEAK learning providers to simplify professional development;
- Improve integration, coordination, and communication for all PEO initiatives; and
- Foster synergies with OSPE to increase the visibility and desirability of professional engineering in Ontario.

My combined experience in academia and industry over the past 12 years equips me with a forward-looking, agile perspective. I am committed to advancing PEO's mission and ensuring our organization continues to uphold the highest standards of engineering excellence and self-regulation.
